INSBIOMM Conference ..

Infectious diseases are disorders caused by pathogenic microorganisms, such as viruses, bacteria, fungi or parasites. They may be transmitted from person to person and responsible for main cause of human death worldwide. The treatment of these diseases face some new problems with emergence and re-emergence of the human pathogens, sometimes with new strains that are resistant to available drugs.

In an effort to contribute in providing a better understanding of infectious diseases, Institute of Tropical Disease (ITD), Universitas Airlangga, develops strategies to diagnose, prevent, and treat several infectious diseases. In this regards, ITD has a close research collaboration with Pusat Kesehatan, Tentara Nasional Indonesia (PUSKES TNI), in this subject.

To disseminate research outcomes resulted from the collaboration, ITD would like to organize an international conference entitled Infectious Diseases, Biothreats, and Military Medicine (INSBIOMM). In addition, the conference will bring together scientists, military practitioners, health professionals, clinicians, students, and other related stakeholders, to communicate their scientific findings in an international atmosphere.

INSBIOMM conference is designed to contain keynote speeches from public officials; lectures from infectious diseases, biothreats, and military medicine experts; and free-paper, in both oral and poster, presentations. We are looking forward to welcoming you all in the conference.

Scopes ..

The topics covered in INSBIOMM conference are particularly infectious diseases, including emerging and re-emerging infectious diseases, as well as those related to biothreats and military medicine. However, the conference also accommodates a broad topics in infectious diseases research, e.g. biochemistry, bioactive natural products, immunology, etc.

Participants ..

We invite scientists in infectious diseases, military practitioners, health professionals, clinicians, students, and other related stakeholders. INSBIOMM will accommodate around 300 participants.
